MX-2

Award-Winning High Performance Thermal Compound

Main Features

- High thermal conductivity
- Low thermal resistance
- Electrically non-conductive
- Non-capacitive
- Non-curing
- Non-corrosive
- Non-bleeding

8 Year durability

MX-2

Award-Winning High Performance Thermal Compound

30g

Non-Metallic Thermal Paste

The **MX-2** outperforms other metallic thermal pastes in the market. Its metal-free, non-electrical conductive design eliminates any risks of causing short circuit, adding more protection to the CPU and VGA cards.

High Performance

Due to its high thermal conductivity and low thermal resistance, the **MX-2** guarantees efficient thermal dissipation from the components. With excellent temperature reduction performance, the **MX-2** is ideal for CPU and GPU cooling, and other applications between power semiconductor components and heatsinks. It is also one of the easy ways to improve the overclockability further!

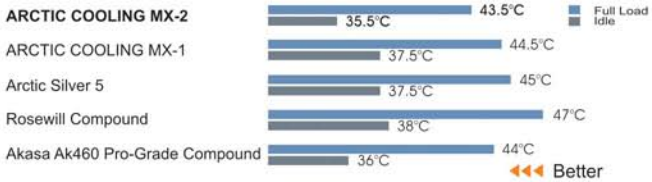
4g

Specifications:

Density:	3.69 g/cm^3
Viscosity:	2850 poise
Net Weight:	4g / 30g
Application:	CPU, GPU and other applications between power semiconductor components and heatsinks

DARKHARDWARE

"It is exciting to see a non-metallic paste showing better performance than metal based ones."



Tested with CPU: Intel Core 2 Duo E6300 overclocked at 2.8GHz
CPU Cooler: Rosewill RCX-Z2-EX
Data source from: MVKTech

All brands and products are registered trademarks or tradmarks of their registered companies.

hardwaretech

"This paste can produce excellent results in the case for the video, and the processor. MX-2 is an excellent choice for enthusiasts."
